Screw Feeder

Datasheet Screw Feeder

Safety and quality – Made in Germany

Maximum precision with the utmost flexibility are among ULF-Tec's greatest strengths. These attributes also apply to the ULF-Tec screw feeder. Maintenance-friendly and service-friendly, as well as being easy to clean, it is also convincing in the most demanding applications.

Products and Fields of Application

- Filling of powder products

Types of Bag and Packaging

- Sealable stand-up bags
- Suitable for paper packaging and plastic packaging
- Other materials on request

Basic construction

Above the screw feeder is a feeder screw, the inlet of which is attached to a product storage container. The dispensing screw and a mixer are located in the funnel. Sieves and cones adapted perfectly to the product ensure weighing accuracy that is as tolerance-free as possible, as well as interruption-free production. All of the parts of the ULF-Tec screw feeder are made in the very highest quality and reliably comply with product requirements (food-safe, etc.). Thanks to their high quality and resilience, this machine is exceptionally long-lasting.

Operation

The dispensing process is started reliably, safely (without the need to involve hands) and therefore in a user-friendly way by pressing a foot switch. The dispensing screw then completes the set filling cycle.
